

KETAN VARDEKAR

Surat, Gujarat | +91-7977120757 | vketan2188@gmail.com | LinkedIn | GitHub | LeetCode | Portfolio

Professional Summary

Full Stack Developer with 4+ years building scalable web applications using Angular, React, Next.js 15, Node.js, and PostgreSQL. Cut API response times by 25%, grew test coverage from 45% to 80%, and accelerated UI delivery by 40% through shared component systems and performance optimization. Proven across healthcare, fintech, and HR tech, with expertise in microservices, Agile/Scrum, and technical mentoring. Passionate about turning ideas into reality — independently architected and shipped **HisabConnect**, a multi-tenant SaaS solving real-world payroll challenges for Indian SMEs.

Work Experience

Full Stack Developer — Elegant Microweb Private Limited, Ahmedabad (Remote)

Feb 2024 – Present

- Led development of a **patient journey tracking module** in Next.js 15 and React within an Agile/Scrum environment, decreasing care coordinator manual workload by 30% via real-time dashboards and automated status triggers.
- Optimized 15+ **Node.js RESTful APIs** with SQL query tuning and Redis caching, cutting average response time by 25% and increasing throughput under peak load by 3x; documented via Swagger.
- Designed a shared **Angular component library** of 20+ reusable components adopted by 3 product teams, accelerating UI build cycles by 40% and standardizing the design system company-wide.
- Implemented **Single Sign-On (SSO)** with **Auth0, Google, and Microsoft Azure AD**, unifying authentication across 3 identity providers and decreasing login-related support tickets by 35%.
- Conducted structured **code reviews** and pair programming sessions for 10 junior and 4 senior developers, lowering defect rate in production by 20% within 2 months through technical mentoring.

Backend Developer — Logwintech Private Limited, Surat

Sep 2023 – Jan 2024

- Configured **AWS S3** for distributed file storage and **AWS SES** for transactional emails, scaling email delivery to 5,000+ users at 99.9% deliverability without third-party SMTP vendors.
- Grew unit and integration test coverage from 45% to 80% using Jest and Cypress, strengthening the CI/CD pipeline and dropping post-release critical defects by 30% over 4 months.
- Designed and maintained scalable **RESTful API** endpoints following microservices architecture principles, improving system modularity and reducing inter-service coupling.

Frontend Developer — Glory Autotech LLP, Surat

Jan 2022 – Sep 2023

- Integrated **Razorpay** and **Open Money** payment gateway APIs processing 2,000+ monthly transactions, decreasing checkout failure rate by 15% through error-handling middleware and retry logic.
- Refactored 5+ **Angular feature modules** with lazy loading and OnPush change detection as part of ongoing performance optimization, bringing average page load time down by 20% and pushing Lighthouse score from 62 to 84.
- Achieved 85%+ **unit test coverage** with Karma and Jasmine across 3 applications, surfacing and resolving 50+ **pre-production bugs** and shortening regression cycles by half.
- Collaborated cross-functionally with designers and backend engineers on 3 **full product launches**, translating Figma wireframes into responsive UIs and delivering all milestones within Agile sprint deadlines.

Education

Bachelor of Engineering — Electronics and Communication

Gujarat Technological University

2018 – 2022

CGPA: 8.37 / 10

Projects

HisabConnect — Next.js 15, React 19, Express.js, PostgreSQL, Prisma, TypeScript, Zustand, JWT, Supabase

- Independently designed and built a multi-tenant **workforce attendance & payroll SaaS** for Indian SMEs end-to-end, replacing manual Excel payroll with an automated engine handling daily/monthly wages, overtime, and holiday-aware calculations.
- Engineered **passwordless OTP authentication** and a **4-role, 12-permission RBAC system** enforced server-side on every request, plus a super-admin console operating every tenant business from one dashboard.
- Shipped as an installable **PWA** with Excel/PDF payroll export and live **SMS, email, and bot-protection** integrations; independently audited 23 prioritized bugs and authored a full test strategy from a zero-test baseline.

Treatment Tracker — Next.js 15, Node.js, PostgreSQL, RESTful APIs, Swagger, Jest, Cypress

- Built a **CGT patient management system** for healthcare providers, monitoring full patient journeys in real time across 6 care milestones from intake to discharge using scalable full-stack architecture.
- Eliminated 40% of manual status-update effort through automated milestone triggers, reaching 90%+ end-to-end test coverage with zero critical regressions across 3 production releases.

TATracker — Angular, Laravel, RESTful APIs, MySQL

- Launched a full-featured **Applicant Tracking System (ATS)** centralizing resumes and hiring documents, decreasing recruiter sourcing and filtering time by 25%.
- Developed a **drag-and-drop pipeline UI** enabling simultaneous management of 100+ candidates across customizable hiring stages, improving hiring manager efficiency by 30%.

EQUIDEI — Angular, Node.js, MongoDB, RESTful APIs, Microservices

- Delivered a **blockchain-based DeFi system** for manufacturing SMEs to tokenize assets, onboarding 50+ businesses in the pilot and cutting traditional loan approval time by 60%.
- Connected **Open Money** payment gateway API integration, achieving 99.5% transaction success rate with sub-2-second on-chain settlement confirmation.

Technical Skills

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React, Next.js (v15), Angular, RxJS, HTML5, CSS3, Responsive Design

Backend: Node.js, NestJS, RESTful APIs, Microservices Architecture, Express.js

Databases: PostgreSQL, MySQL, MongoDB, Redis, Prisma ORM

Cloud & DevOps: AWS S3, AWS SES, AWS ECR, AWS ECS, Docker, Auth0, CI/CD Pipelines

Testing: Jest, Karma, Jasmine, Cypress, Unit Testing, Integration Testing, K6(Grafna), Stress Testing, End-to-End Testing

Methodologies: Agile, Scrum, Code Review, Technical Mentoring, Cross-functional Collaboration

Tools: Swagger, JIRA, Trello, Git, GitHub Copilot, Cursor AI, Claude Code, Figma
